Ho Chi Minh City, Viet Nam | 0915421830 | nguyenxuankha5371@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

OBJECTIVE

Fullstack Developer with 2+ years of experience in building **SaaS applications** using **React (Next.js) and Node.js (NestJS)**. Gained practical experience in developing essential business features like **invoice workflows and RBAC systems**. Focused on **continuous system improvement**, notably contributing to a project that **optimized data reporting for 1M+ records, reducing processing time by 90%**. A collaborative team player with experience in **international environments (Singapore, Korea)**, eager to leverage **AI-assisted tools (Cursor)** to solve real-world problems and deliver value to product-driven teams.

SKILLS

- **Programming Languages:** TypeScript, C#, Java, Golang
- **Framework:** React.js, Next.js, Vite, NestJS, Express, ASP.NET
- **Databases:** PostgreSQL, MySQL, MongoDB, MSSQL
- **DevOps & Infrastructure:** AWS, Docker, Nginx, Grafana, Prometheus
- **VCS:** Git, GitHub, GitLab
- **Languages:** English (Professional Working Proficiency), Japanese (Elementary)
- **Others:** OOP, Agile/Scrum, CQRS, Saga Pattern, SOLID, Microservices

EDUCATION

FPT University
SOFTWARE ENGINEERING
• **GPA:** 3.21/4

Sep 2021 - May 2025

WORK EXPERIENCE

Bizzi

Nov 2025 - Present

Fullstack Developer

- Developed **financial-workflow** features using Next.js, NestJS, enabling enterprise clients to process invoices faster and reduce manual-entry errors
- Implemented and consumed **GraphQL** APIs with NestJS and MySQL for invoice processing and internal data workflows, streamlining data exchange and cutting integration time
- **Participated in code reviews** and provided constructive feedback to other developers, enhancing code quality and team collaboration
- Re-engineered the invoice export system (processing **1M+ records**), successfully reducing execution time from **45 minutes to 5 minutes** (an **89% performance boost**).

Cigro

Aug 2025 - Oct 2025

Backend Developer

- **Optimized system performance and reliability** by developing backend services with NestJS and TypeORM, resulting in **improved database query efficiency** through Prisma and PostgreSQL.
- Integrated **Sendbird and Firebase** for **chat, calling, and notifications**, which enhanced user communication features
- Implemented IAP webhooks and BullMQ for background tasks such as automatic message deletion, reducing manual cleanup time and ensuring timely processing of user actions
- **Enhanced system stability** by identifying bottlenecks through load testing with **Autocannon and K6**, visualizing performance metrics in Grafana to **ensure 99.9% uptime** during high traffic.
- Collaborated daily with **Korean development teams** in an English-speaking environment, using Git for version control, to align system design and technical requirements, which accelerated feature delivery by improving cross-team communication

FSoft

Dec 2023 - May 2024

Frontend Developer

- Developed new training modules and user dashboards for the FPT Fresher Academy Training Management System using React and committing code via GitHub, which resulted in a smoother user experience
- Applied **SDLC and Agile practices**, including sprint planning and daily stand-ups using JIRA, which helped keep the project on schedule and improved team coordination
- Refactored frontend modules and implemented **React Query (TanStack Query)** to improve data fetching efficiency and reduce redundant API calls.

Axpara

Sep 2022 - Nov 2023

Frontend Developer

- Implemented image upload and annotation features for crack detection management using AWS S3 for storage and a Canvas-based annotation tool, enabling engineers to identify defects **30% faster**
- Collaborated with the team lead in **Agile sprints**, using Jira and daily stand-ups to coordinate work, and delivered outsourced projects on schedule while maintaining code quality through regular code reviews
- Communicated project status and technical requirements to international stakeholders in **Singapore using English and Slack**, ensuring clear alignment and preventing project delays

PROJECTS

IPA (Bizzi - Invoice Process Automation) | <https://ipa-uat.bizzi.vn/>

Nov 2025 - May 2026

- Contributed to a comprehensive frontend upgrade from **React 18 to React 19** and **Ant Design v4 to v6**, resolving breaking changes in legacy libraries to ensure long-term stability and security.
- Maintained and optimized core **Processing & Receiving** modules, supporting automated bots in collecting and synchronizing invoices from multiple sources into a centralized system.
- Researched and implemented an optimized reporting workflow for **1M+ records**, achieving a **9x performance boost** in data export speeds through SQL query refactoring and efficient stream handling

EveryTalk

Sep 2025 - Oct 2025

- A **real-time communication system**, enabling chat and call features.
- Integrated Sendbird SDK to implement **1-1 chat and voice/video call features**.
- Built NestJS APIs to handle **user sessions, chat rooms, and notifications**.
- Deployed and maintained the system **using Docker on AWS EC2**, ensuring high availability and scalability.

Oubong

Aug 2025 - Sep 2025

- A trekking platform that allows users to join clans, manage members, earn and **distribute LuckyPeak coins**, and **purchase coins or subscriptions via in-app purchases**.
- Integrated **in-app purchase (IAP)** for coin and subscription payments.
- **Increased system scalability and reliability** by migrating from EventEmitter2 to a **serverless architecture (AWS SQS & Lambda)**, reducing processing latency for in-app purchase webhooks.

A system for building maintenance and crack monitoring

Dec 2024 - Apr 2025

- A system that supports building management in **monitoring maintenance tasks**, tracking crack reports, assigning work, and managing repair costs, **integrated with an AI model** to detect building cracks from images.
- **Successfully led a team of developers** to deliver a complex building maintenance system on schedule, managing the full SDLC from requirement gathering (SRS) to **Microservices architecture design**.
- Architected and implemented an automated crack detection pipeline by integrating **YOLOv11 pre-trained models** via AWS Lambda, reducing manual inspection time by 30%.
- **Designed and implemented microservices architecture** using NestJS, with AWS Lambda calling **Ultralytics YOLOv11 API for image crack detection**.
- Coordinated development tasks among team members **to ensure project milestones and deadlines were met**.

HONORS & AWARDS

- **Honorable Student - Fall 2024**: Sep 2024 - Dec 2024
- **Honorable Student - Summer 2024**: May 2024 - Aug 2024
- **Honorable Student - Summer 2022**: Apr 2022 - Sep 2022
- **Third-place of Science Technology in Lam Dong province**: Sum 2020
